

INFRASTRUCTURE

& CYBER SECURITY

SERVICES

At GigaTECH we understand that successful business outcomes are intricately reliant on information technology. We utilize experience driven insight to help you to plan and strategize your organization's business requirements. Together we will design and implement solutions to create a fully optimized and secure, IT infrastructure that will support your business for today's initiatives while preparing for the future of tomorrow

The requirements for modern applications are evolving at breakneck speeds which are necessitating the old network environment to evolve. Networks today need to be agile in order to support mobile, cloud, IoT and a host of other new innovations. Today's robust applications require IT teams to have flexibility to view traffic end-to-end, ensuring key performance indicators are met.

Our Software-defined Networking (SDN) Services Include:

- Data Center Networking
- Software-defined Networking (SDN)
- LAN/WAN Infrastructure
- Wireless Infrastructure
- Infrastructure modernization
- Real Time Protocol (RTP) optimized Infrastructure

GigaTECH™

Creative Solutions for a Complex World

INFRASTRUCTURE & CYBER SECURITY SERVICES

○ CYBER SECURITY

Business stakeholders in today's digital environment expect seamless secure, and extremely responsive access to complex data systems. The complexity of the systems has expanded exponentially to support the end-user who requires access to this data securely anytime, anywhere, regardless of where the applications and data live, and regardless of what device is used.

A secure environment does not have to impede productivity, GigaTECH works with your team to achieve a solution that minimizes risk while streamlining user access and securing the data environment, whether on premises, via the cloud, or in a hybrid solution.

Our Cyber Security Services Include:

- Network Infrastructure and Endpoint Defense
- Threat Monitoring
- Remediation and Response
- Data Protection
- Policy Enforcement
- • Security Tool Consolidation

READY TO GET STARTED?

A properly conceived, comprehensive network and cyber security solution begins with an understanding of the organization's desired business outcomes, and a clear picture of how all users will access and use data to achieve those outcomes.

LET'S GET STARTED
TODAY ON A CREATIVE
SOLUTION FOR YOUR
COMPLEX NEEDS.
